ENERGY POLICY

Applicability

The policy applies to MAHB group and airport community.

Introduction

The objectives of this policy are to improve energy consumption efficiency, enhance energy efficiency initiatives and strive to become a world-class energy management in aviation industry.

Policy Statement

1. MAHB promotes and maximizes the efficient use of energy in delivering the service excellence to all airport community while sustaining a seamless passenger experience.
2. Providing effective energy utilization without compromising safety, comfort and convenience by using the available energy resources and renewable energy in the most effective manner.
3. Complying with national as well as international laws and legislation, aviation regulations, authority and compulsory standards.
4. Developing and implementing energy management and renewable energy action plan with necessary supports in business, financial and resources to achieve its objectives and targets.
5. Adopting energy best practices and technology advancement with energy efficient criteria to reduce energy consumption in its projects and programs (CAPEX, OPEX, EPC and others).
6. Supporting energy efficiency as one of the criteria in purchasing equipment and services related to energy consumption.
7. Enhance awareness and knowledge at all level of employees and stakeholders in energy efficient practices in daily activities through effective communications and building skills and competencies in efficient management of energy.
